

15+ Years Engineering

\$10M+ Capital Raised

4x Dev Velocity Gains

6x User Retention Lift

SUMMARY

Executive Technology Leader and AI Specialist with 15+ years as a hands-on Hardware and Full Stack Engineer and 10+ years building and scaling engineering organizations. Deep expertise in Generative AI, AI Strategy, Data Governance, and enterprise platform architecture - proven across board-level advisory, SOC2/HIPAA-compliant systems, and AI-powered product delivery at scale. Co-Founded Livestalk, an AgTech SaaS startup built to serve the agricultural community - rooted in a cattle ranching upbringing and 4-H / FFA background in central Nebraska. Thrives at the intersection of technical vision, mission-driven leadership, and direct team execution.

EXPERIENCE

Foxteck, Austin TX - Founder / Principal AI Consultant

DECEMBER 2025 - PRESENT (Contract) : Agentic AI & LLM Engineering Consulting *Independent consulting practice delivering AI-powered products and guiding engineering teams through structured AI adoption*

- Architected and delivered a full-stack production application with a React UI driving a Claude-powered agentic backend - replacing manual workflows with fully autonomous AI execution
- Integrated a Claude-powered agent into an existing client platform (True Value Hub): connected to live operational data streams across accounts-payable, product-development, and overhead, and surfaced automated analysis and recommendations to drive informed actions and decisions - cutting manual reporting cycles from days to minutes
- Productized a reusable agentic-finance framework deployed across multiple client engagements: ingests operational data, runs AI workflow pipelines, and surfaces decision-ready outputs without human-in-the-loop overhead
- Utilized Claude Code and GitHub Copilot as primary development tools across all engagements - achieving 4x development velocity gains and enabling solo delivery of production-grade full-stack applications at team scale
- Designed, built, and shipped The Grading Assistant in 60 days - a Google-approved EdTech SaaS integrating Schoology and Canvas LMS APIs, achieving CASA Tier 2 security certification prior to launch

IKIN Technologies, Austin TX - VP of Engineering / Chief Technology Officer

JUNE 2022 - PRESENT (Full-time Hybrid) : Dynamically Generated Entertainment Experiences (VR / AR / MR) *Hardware / Software startup building immersive entertainment experiences via Computer Vision and Generative AI*

- Defined and owned engineering standards - code review, deployment practices, and AI-native tooling guidelines - building the technical culture that scaled across 15+ internal engineers and four external contract teams
- Delivered quarterly Board of Directors presentations on technology state, IP/patent matters, and compliance posture; participated in 6-9 investor and client-facing pitches annually, contributing to \$10M+ in cumulative investment raised
- Led Design / Production of 5 Unity hyper-casual game experiences delivered within a 9-month timeline
- Deployed a Generative AI Platform for On-Demand User-Centric Advertising Media and incorporated DevOps CI/CD Pipelines for automated build, test, and release
- Architected a Visual Generative AI pipeline using Stable Diffusion and Patented IP to fully automate on-demand artistic content creation - eliminating manual production bottlenecks across the content team
- Managed vendor contracts and third-party risk assessments for four external contract teams; led talent acquisition, performance reviews, KPI development, and HR training compliance for 15+ staff
- Led R&D initiative to deliver SaaS Holographic Gamified Educational Material in a browser-based wireless web environment - expanding access to immersive XR learning experiences without native app dependencies
- Active industry speaker at InfoComm 2025, ITExpo, and podcast contributor on Generative AI and immersive technology

Livestalk, Georgetown TX - Technical Director / Chief Technology Officer

JULY 2018 - JANUARY 2024 (Concurrent Startup Founder) : Ag-Tech Co-founded *Hardware / Software startup applying Computer Vision to automate Cattle Inventory and Preventive Care - built from a cattle ranching background and 4-H / FFA upbringing in central Nebraska*

- Architected a SaaS platform analyzing Security Camera and Drone video via OpenCV, TensorFlow, and Active Machine Learning to identify and report livestock inventory - designed for working ranchers, farms, and feedlots
- Raised Angel / Incubator Capital and executed an 18-month technology roadmap; achieved SOC2 Security Compliance and NIH data standards with all records maintained in encrypted form
- Validated platform through live tech demonstrations at the 30th Annual Sandhills Ranch Expo (Bassett, NE) - 93.8% of ranchers surveyed confirmed need; 80.6% expressed immediate intent to use; established key accounts with a regional DVM managing 100K+ livestock, the main Central Nebraska livestock market, and a 5-feedlot management operation
- Designed agentic AI workflows to automate livestock inventory analysis and reporting - enabling real-time, autonomous decision support from drone and camera feeds without human-in-the-loop processing
- Operated as concurrent founder/Chief Technology Officer alongside full-time executive roles, demonstrating entrepreneurial range and cross-context technical leadership

HIA Technologies, Pasadena CA - VP of Engineering / Product Director

SEPTEMBER 2020 - JUNE 2022 (Full-time Remote) : Health-Tech AWS SaaS startup embedding AI into Digital Metahumans for Mixed Reality Tele-Health environments

- Identified critical adoption failure in existing architecture and led full platform rebuild to a browser-based system - achieving 6x increase in user retention and enabling onboarding of WebMD and Kaiser Permanente as enterprise clients
- The key: physicians and clinical staff are expert practitioners, not tech users - the rebuild met them inside the tools and workflows they already trusted, stripped friction to zero, and let the AI work invisibly
- Deployed SOC2/HIPAA-compliant SaaS creating AI-driven Metahumans for Automated Tele-Health workflows
- Presented to Angel/VC investor networks and Boards of Directors, contributing to new investment and enterprise client onboarding

Faceware Technologies, Round Rock TX - Lead of Engineering

JULY 2016 - SEPTEMBER 2020 (Full-time) : Tooling / SDK / Automation for Game Development Hardware and Software startup automating Facial Animation creation for AAA Games and Cinematics

- Head of Engineering, DevOps, and QA for hardware, SaaS product, 2 applications, and Tech SDK
- Negotiated vendor and partnership contracts with enterprise clients including the NFL and L'Oréal
- Managed talent acquisition across direct hire, HR team, and headhunting channels; administered performance reviews, compliance training, and KPI development across the full engineering org
- Leveraged OpenCV, FFmpeg, and TensorFlow to evaluate real-time video and derive facial motion capture output
- Architected all DevOps Pipelines, CI/CD, Data Collection, and Business Development Lead Automation

IBM Watson / Watson Health, Austin TX - Engineer / Project Manager - Watson Immersive Technologies

AUGUST 2014 - JULY 2016 (Full-time) : Cloud Services (SaaS / PaaS) Full Stack Engineer building Watson-enabled interactive experiences at enterprise scale

- Advised enterprise clients on IBM Watson SaaS adoption and AI strategy; led executive-facing presentations and R&D lab tours championing how AI solutions could de-risk and enhance existing business operations
- Managed cross-functional delivery of AI-enabled enterprise experiences, coordinating internal and client teams to ensure on-time, on-scope execution across high-visibility engagements
- Built interactive experiences in Unity, Unreal, and WebGL/ThreeJS showcasing Watson AI at enterprise scale
- Architected a Node.js / .Net REST and WebSocket Server Framework for on-demand Watson AI content delivery

Madcatz Interactive, San Diego CA - Lead Software Engineer

NOVEMBER 2011 - NOVEMBER 2013 (Full-time) : Hardware / Software Game Development Lead Engineer for a Combat-Focused Flight Simulation Massive Multiplayer Online Experience

- Hired, managed, and directed all Software Engineering for Madcatz Hardware and MMO Combat Game title
- Led C++ / .Net development for custom UI components supporting Online Real-Time Interactivity

Gamecloud Studios, Murrieta CA - Software Engineer

NOVEMBER 2013 - AUGUST 2014 (Full-time) : Mobile Gameplay Engineer in C++ / .Net / Unity - released 6 titles across Facebook, Android, iOS, and Web; led development of a SaaS-controlled Parental Controls Android application

United States Navy, Lemoore CA - FA-18 Avionics Technician 3rd Class

FEBRUARY 2001 - MARCH 2006 : Maintained sensitive Comm / Nav hardware and led QA for the avionics division

EDUCATION

California State University, Fresno CA - B.S., Computer Science - User Interface & Design Engineering

Art Institute, San Diego CA - Visual Game Programming and Design
